Invest in your home, not your energy bill.

Seal your building and save.

ThermalGuard™ CC2 spray foam insulation plays a crucial role in ensuring your property's heating, ventilation and air conditioning (HVAC) system operates efficiently, resulting in energy savings. As a thermal insulator, air barrier and vapor barrier in one, ThermalGuard CC2 completely air seals, keeping conditioned air inside the building and preventing energy loss due to outside air infiltration.

When used with other responsible building components, ThermalGuard CC2 reduces energy consumption, helping you save up to 50% in heating and cooling costs*.

Insulate for improved comfort.

Unlike traditional insulation materials, ThermalGuard CC2 is designed to not sag, settle or deteriorate over time, ensuring lasting peak performance.

Unfiltered air leaking into a building not only decreases its efficiency, but can also lead to poor indoor air quality. Unlike traditional insulation, ThermalGuard CC2 blocks harmful outdoor allergens, pollutants, sound and moisture, improving your air quality and comfort.
