Concrete Solutions® Water Based Stain System offers a wide range of penetrating colors that are both environmentally friendly and easy to apply.

Unlike acid stains, water based stains produce more consistent color, offer low VOCs (volatile organic compounds) and are safer to apply due to the absence of solvents and acids. While they are very effective in adding color to plain or stamped concrete surfaces, they can also be used in conjunction with any integrally colored Concrete Solutions texture finishes to create unique solid, transparent or faux finish colorations. The endless color possibilities make it easy to capture dynamic looks and styles, bringing energy to any space.
